1. Introduction

1.1 Purpose

This document shows the UI and UX design of the Smart Food Ordering and Delivery Platform. It explains how users interact with the system using application screens and navigation flow.

1.2 Objective

The goal of this design is:

- To make the application easy to use.
- To allow customers to order food easily.
- To help restaurants and delivery partners manage orders.
- To help admin control platform activities.

1.3 System Flow Description

This explains how different users interact with the Smart Food Ordering and Delivery Platform. The system supports four main roles:

1. Unregistered User (Guest)
2. Registered Customer
3. Restaurant Owner
4. Delivery Partner
5. Administrator

1.3.1 Unregistered User (Guest) Flow

An unregistered user can explore the platform before creating an account.

<u>Platform Access & Browsing</u>

1. User opens the platform website.
2. Home page displays restaurants and food categories.

3. User searches restaurants or food items.
4. User views restaurant details, ratings, and delivery information.
5. User opens restaurant menu.
6. User views food items and prices.
7. User adds items to cart if desired but cart will show that user needs to be logged in first.

At this stage, ordering is not allowed.

Login Requirement

8. When user clicks Place Order, system asks user to login or register.
9. User chooses to login or create a new account.
10. After successful login, the user becomes a registered customer and continues the ordering process

1.3.2 Registered Customer Flow

After login or registration, the user becomes a registered customer.

Cart Review & Order Confirmation

1. Customer reviews cart items.
2. Customer modifies quantity or removes items if needed.
3. Customer confirms items to proceed.

Address Selection

4. Customer selects an existing delivery address or adds a new address.

Payment Process

5. Customer chooses payment method:
    - Online payment options
    - Cash on delivery.
6. System processes payment or confirms COD order.
7. Order is placed successfully.

Order Processing

8. Restaurant receives the order.
9. Restaurant accepts or rejects the order.
10. Order preparation begins.

Delivery Assignment

11. System assigns a delivery partner.
12. Delivery partner accepts assignment.
13. Delivery partner collects order from restaurant.

Delivery Tracking

14. Customer tracks order preparation progress.
15. Customer views live delivery partner location.

Order Completion

16. Delivery partner delivers order.
17. Customer receives delivery confirmation.
18. Customer can submit rating and feedback.

Order History

19. Order details are stored.
20. Customer can reorder previous orders.

1.3.3 Restaurant Owner Flow

Restaurant Registration

1. Restaurant owner registers restaurant on platform.
2. Admin reviews and approves registration.

Dashboard Access

3. Restaurant owner logs into dashboard.
4. Restaurant manages menu items and prices.

5. Restaurant updates availability status.

Order Handling

6. Restaurant receives new order notification.
7. Restaurant checks order details.
8. Restaurant accepts or rejects order.

Order Preparation

9. Restaurant prepares food.
10. Preparation status is updated.

Order Pickup

11. Delivery partner arrives.
12. Order is handed over for delivery.

1.3.4 Delivery Partner Flow

Account Access

1. Delivery partner registers and logs into system.

Delivery Assignment

2. System assigns delivery orders.
3. Delivery partner views assigned orders.
4. Delivery partner accepts order.

Order Pickup

5. Delivery partner navigates to restaurant.
6. Delivery partner picks up order.

Delivery Process

7. Delivery partner navigates to customer location.
8. Live GPS location is shared.

Delivery Completion

9. Order is delivered to customer.
10. Delivery marked completed.

1.3.5 Administrator Flow

Admin Login

1. Admin logs into admin panel.

Platform Management

2. Admin reviews restaurant registration requests.
3. Admin approves or rejects restaurants.
4. Admin manages users and delivery partners.

Order Monitoring

5. Admin monitors all active orders.

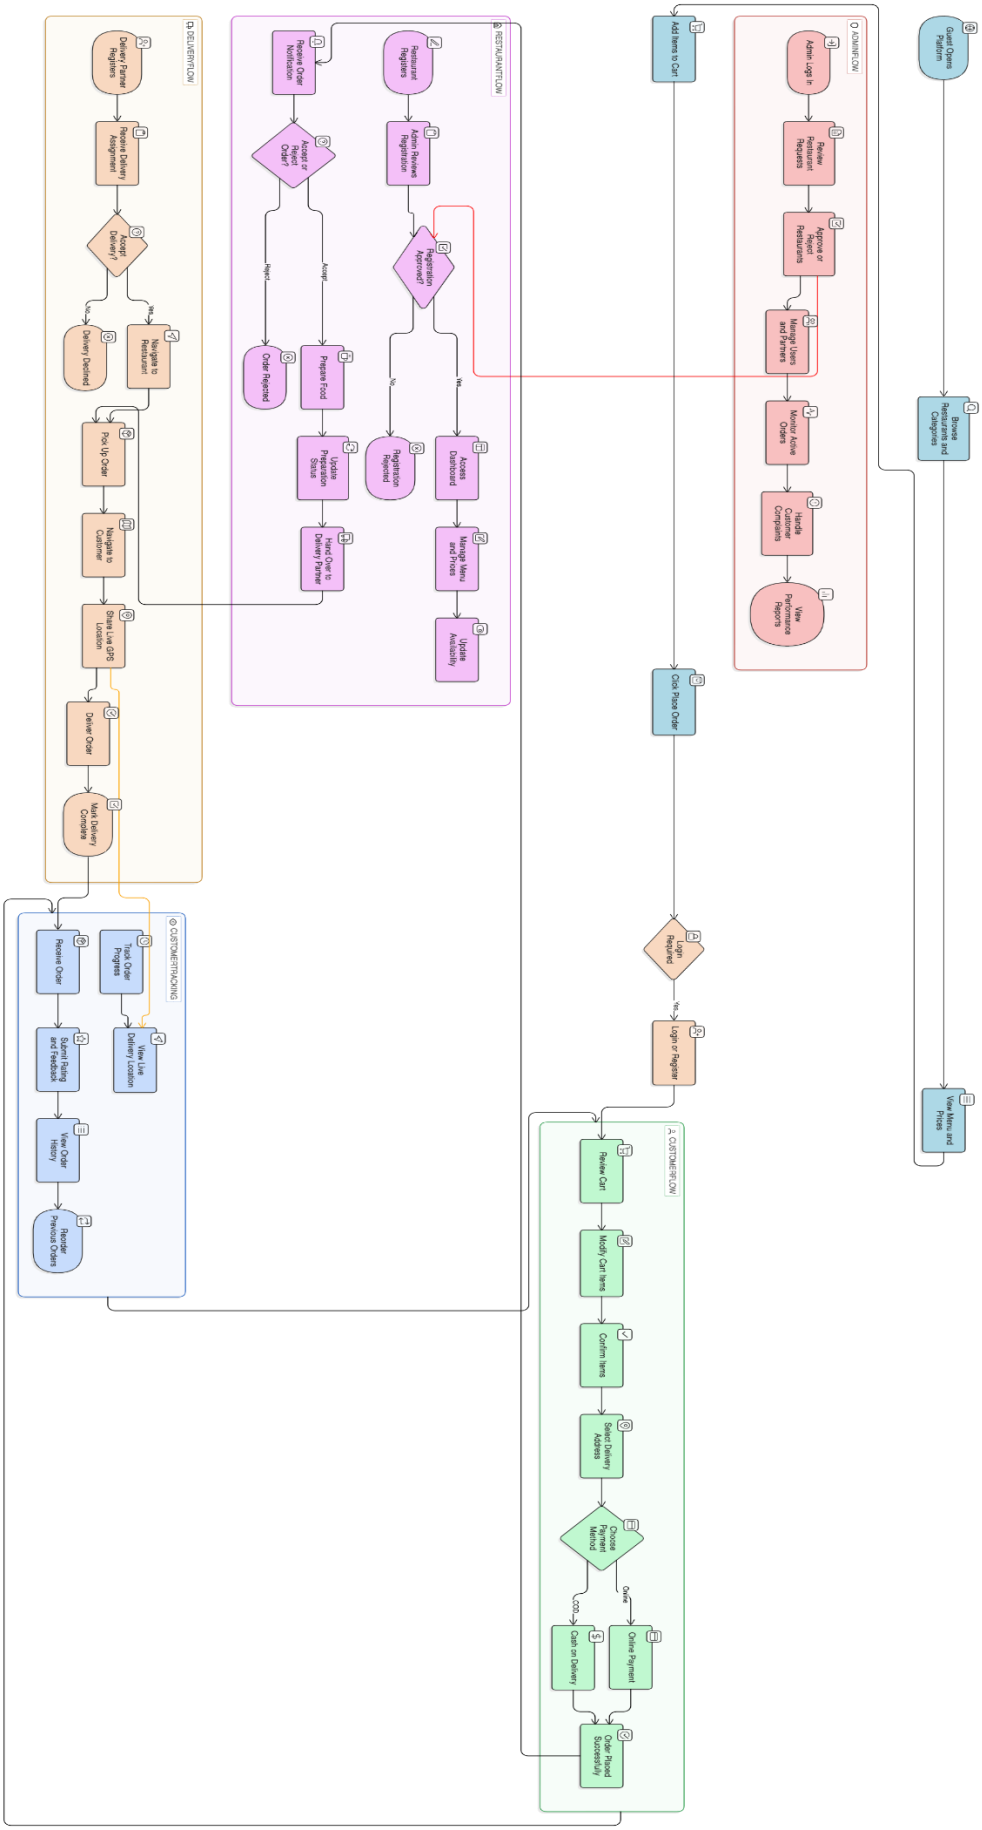
Complaint Handling

6. Admin reviews customer complaints.
7. Admin takes necessary actions.

Reporting

8. Admin views platform performance reports.

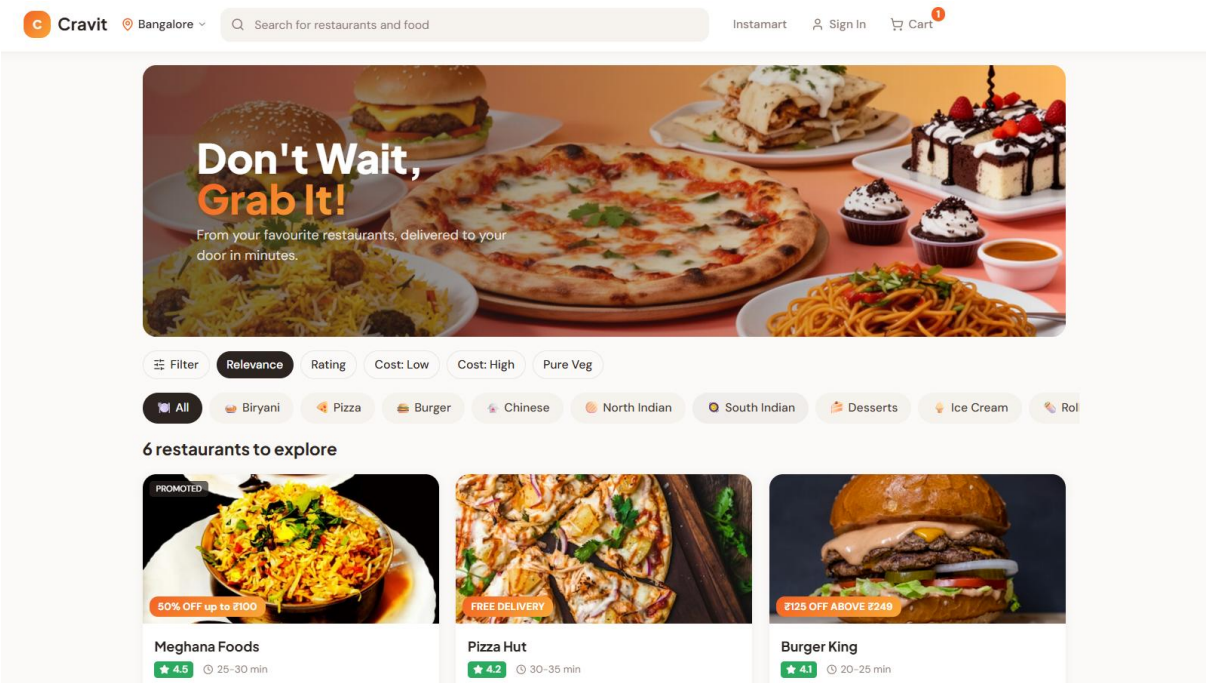
1.4 System Flow Diagram



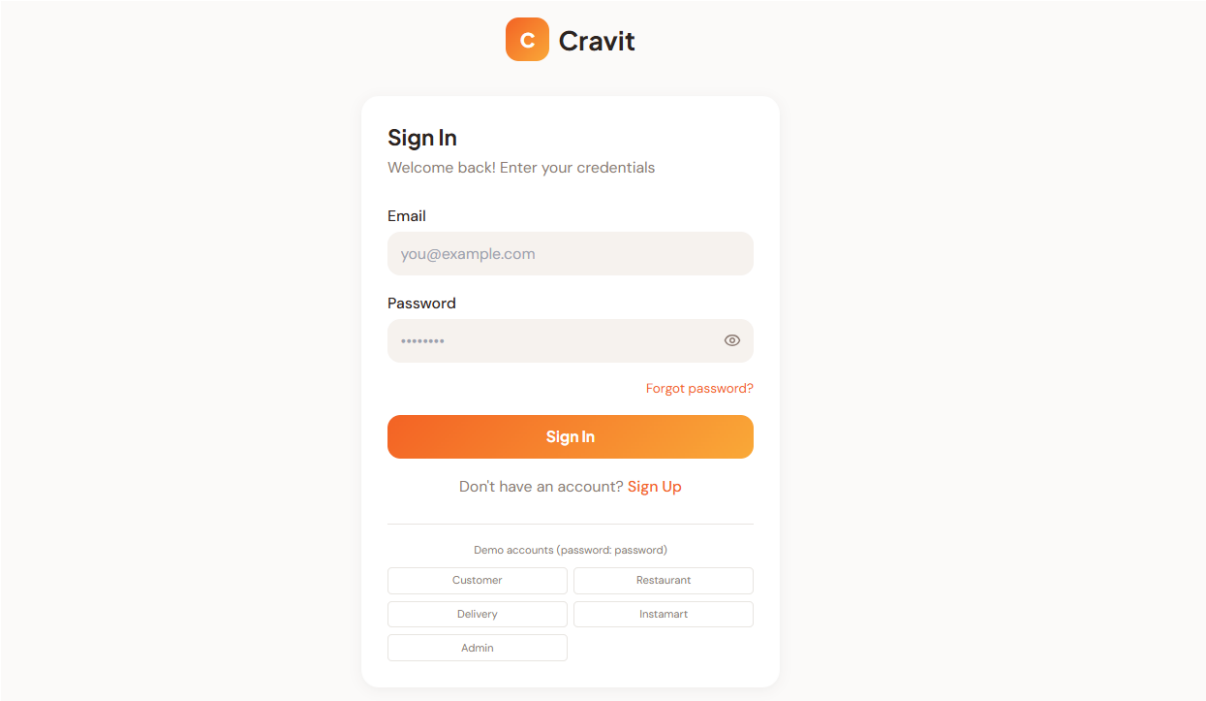
2.UI/UX Screenshots

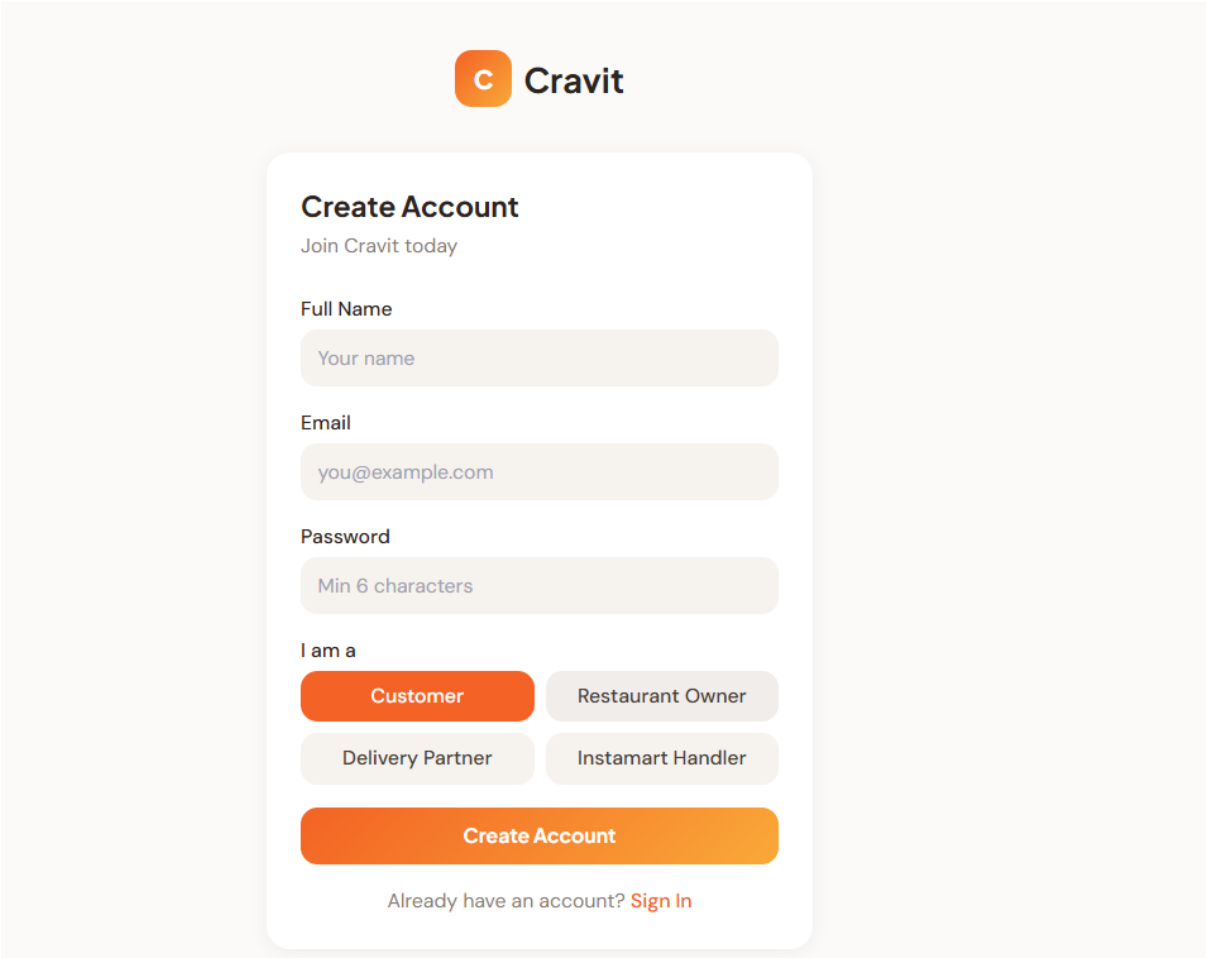
2.1 Customer Screens

1. Home Page

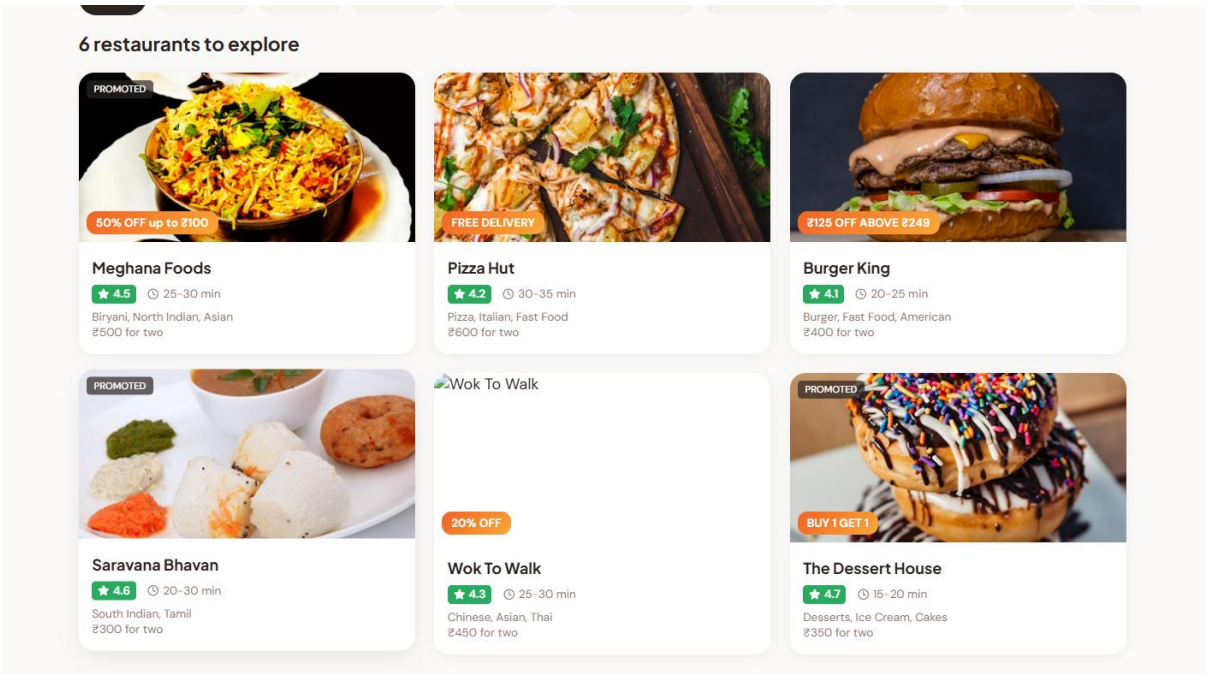


2. Login / Register Page

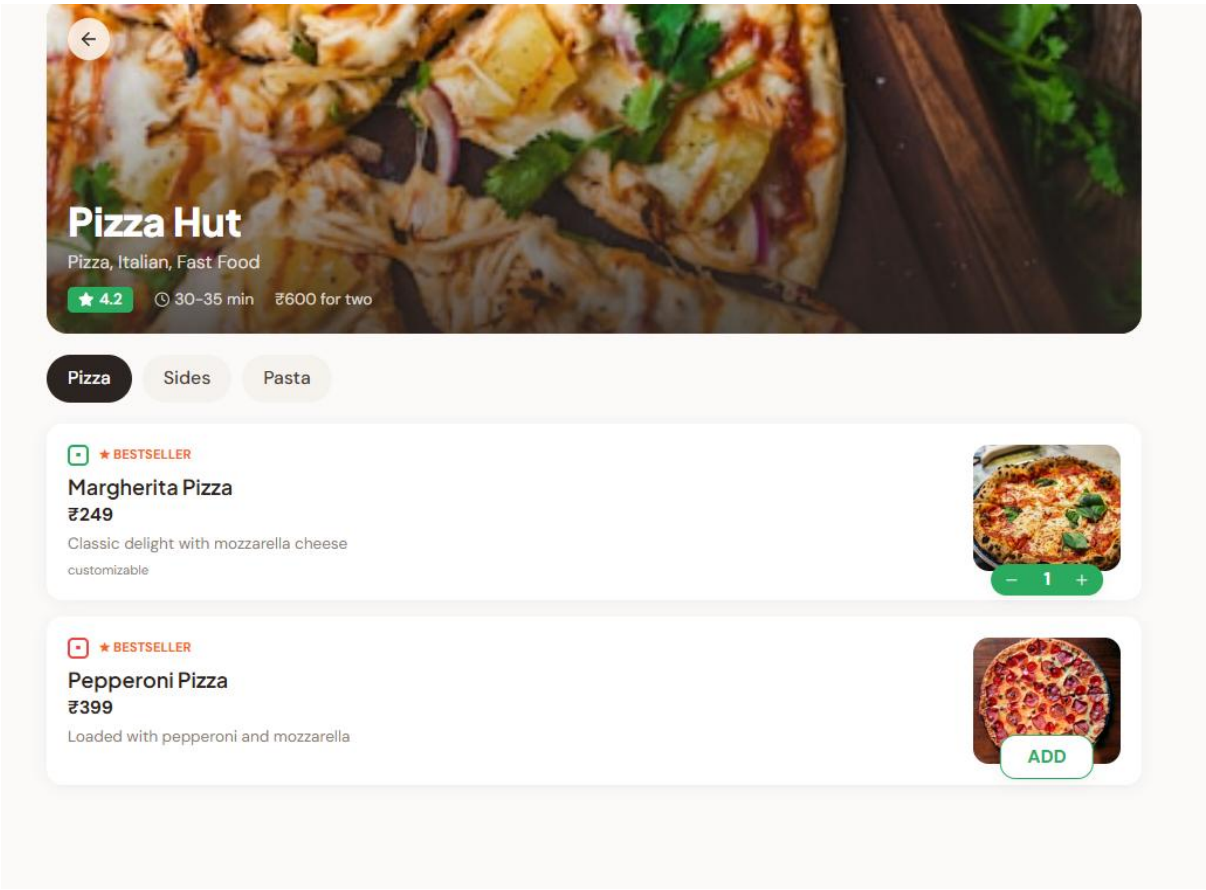




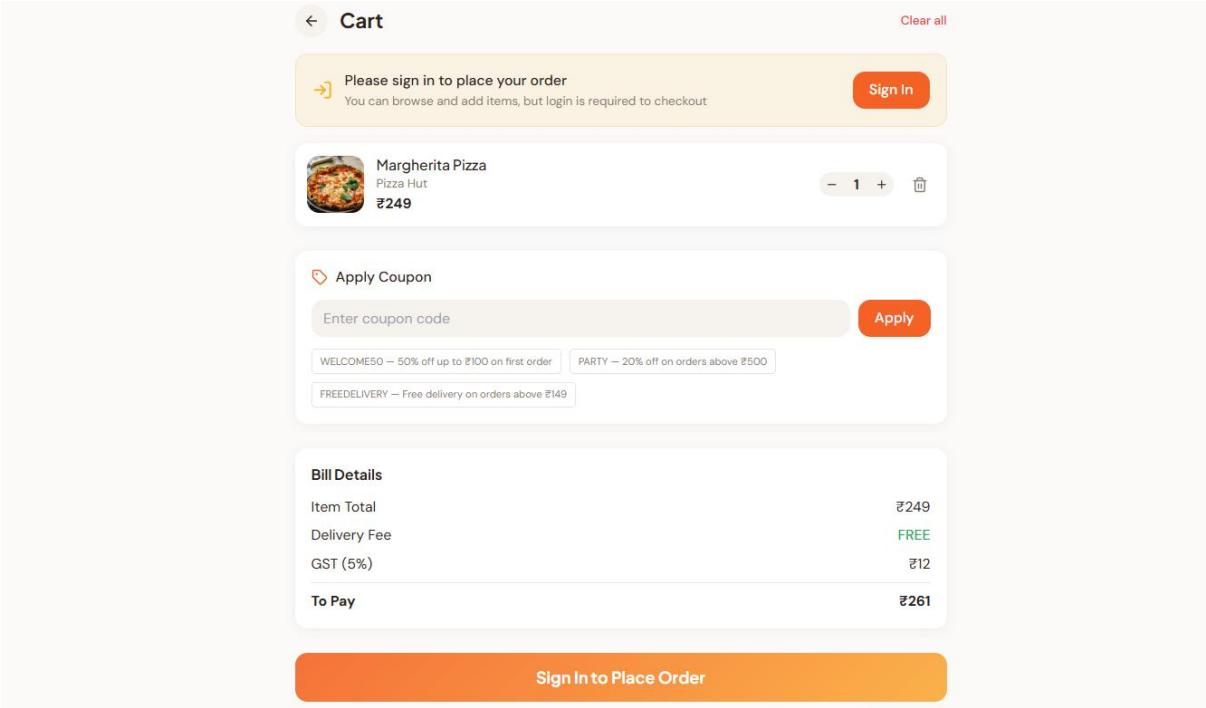
3. Restaurant List Page



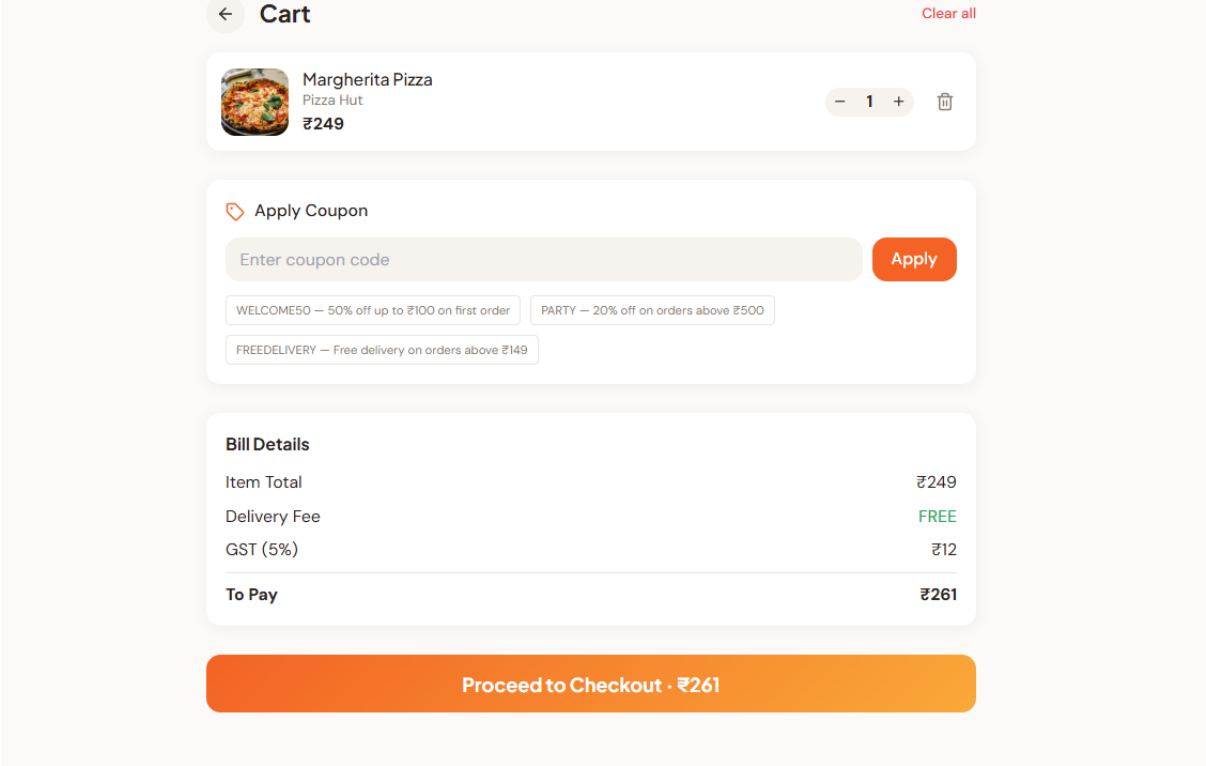
4. Menu Page

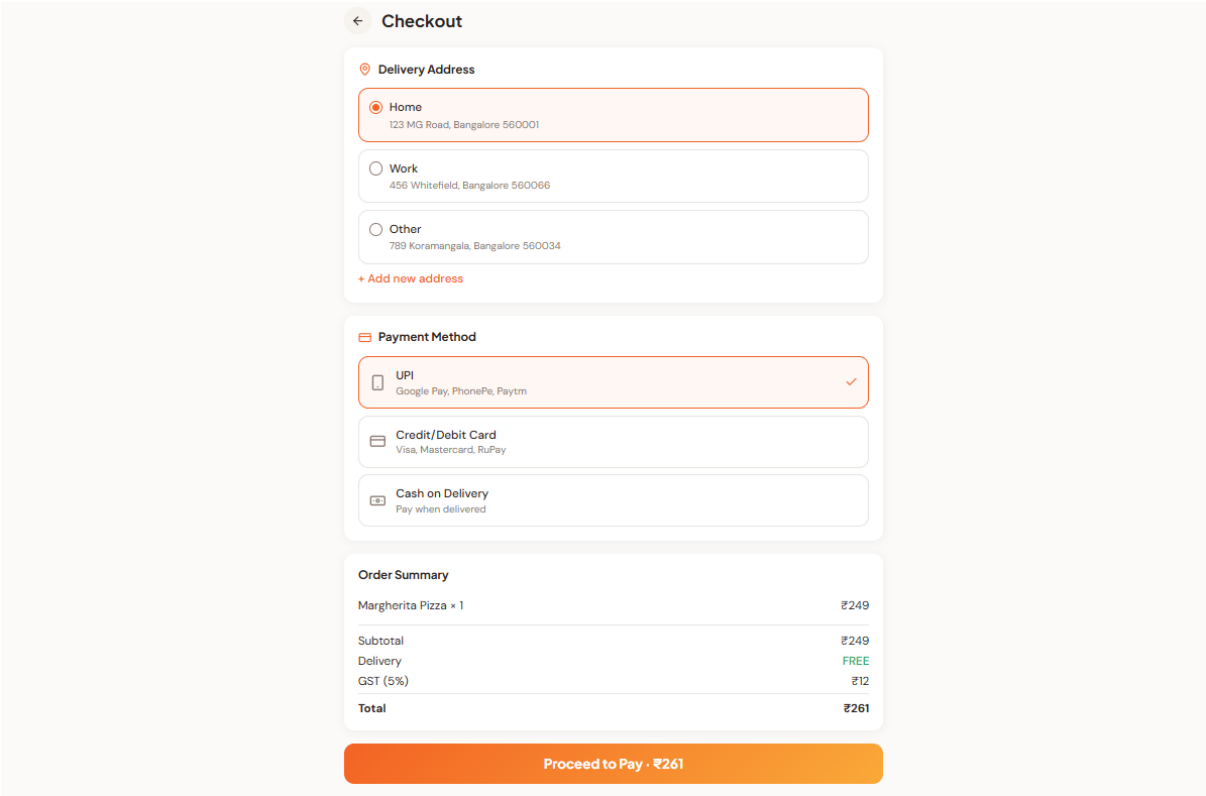


5. Cart Page

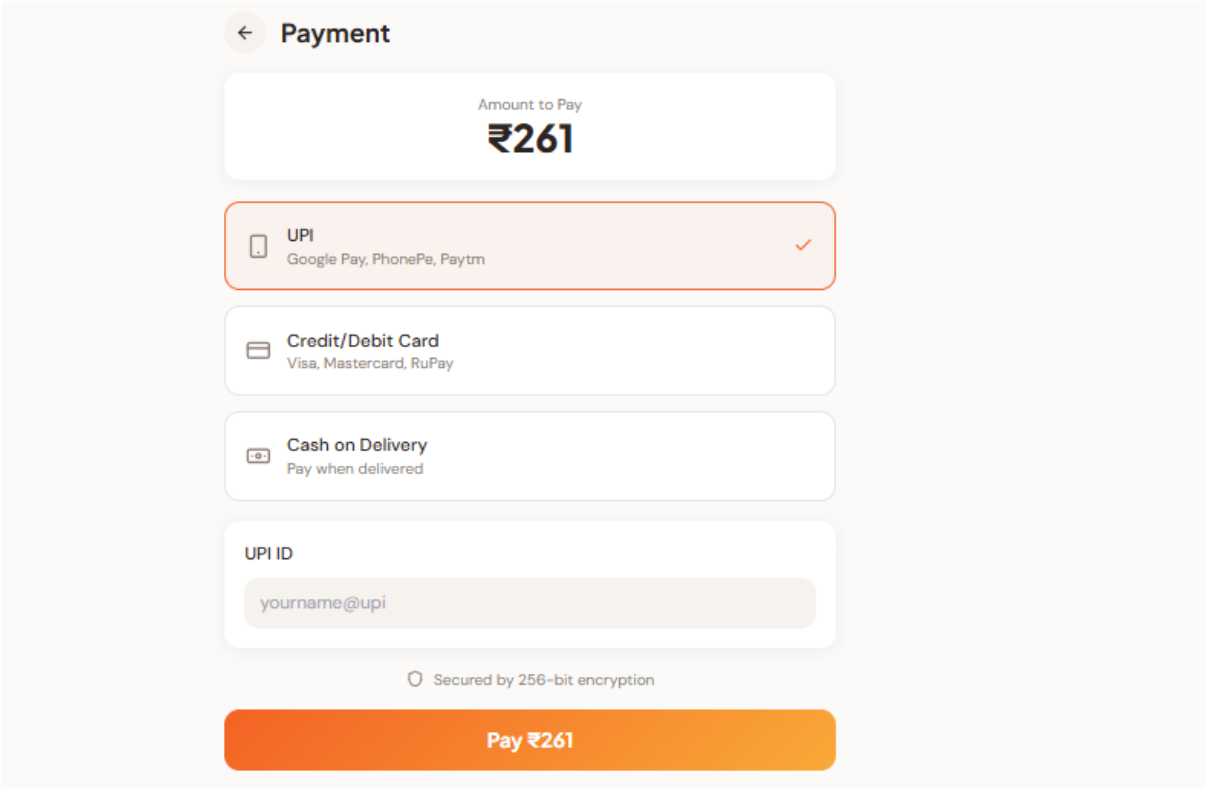


6. Checkout Page

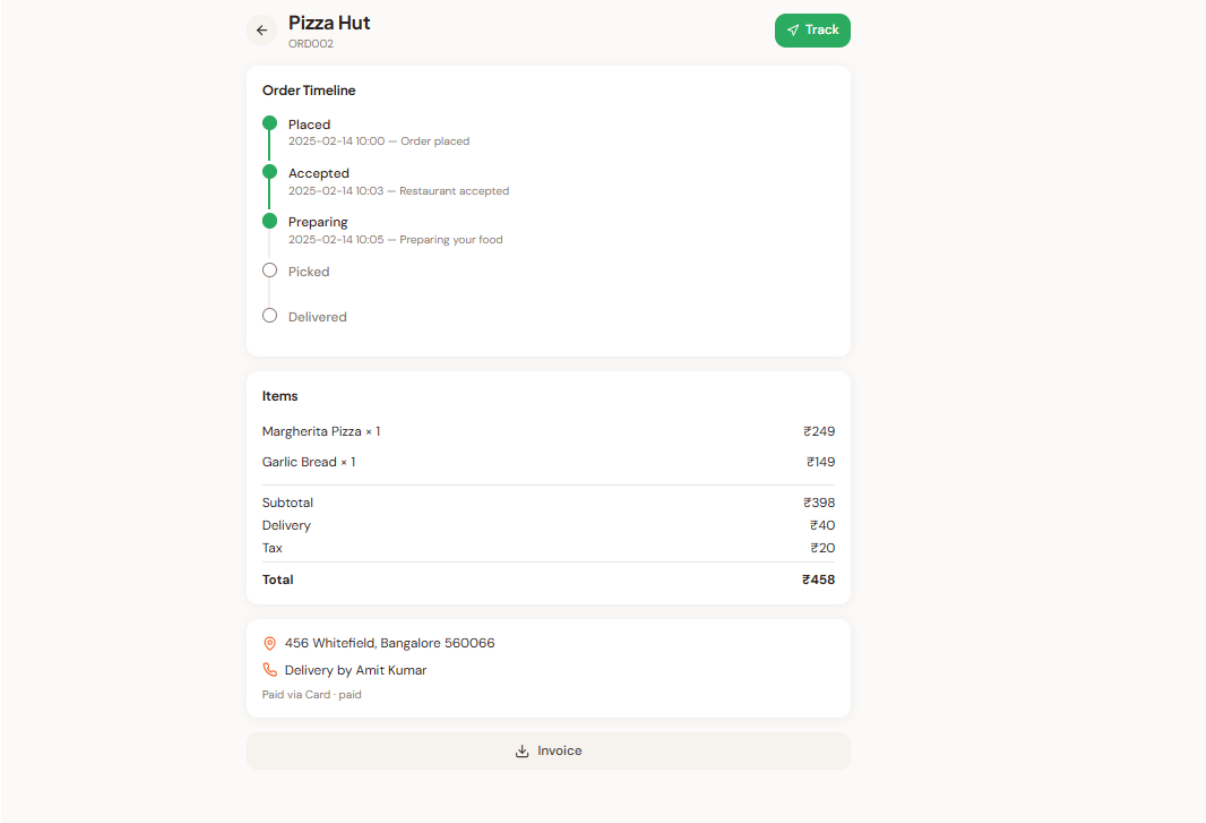


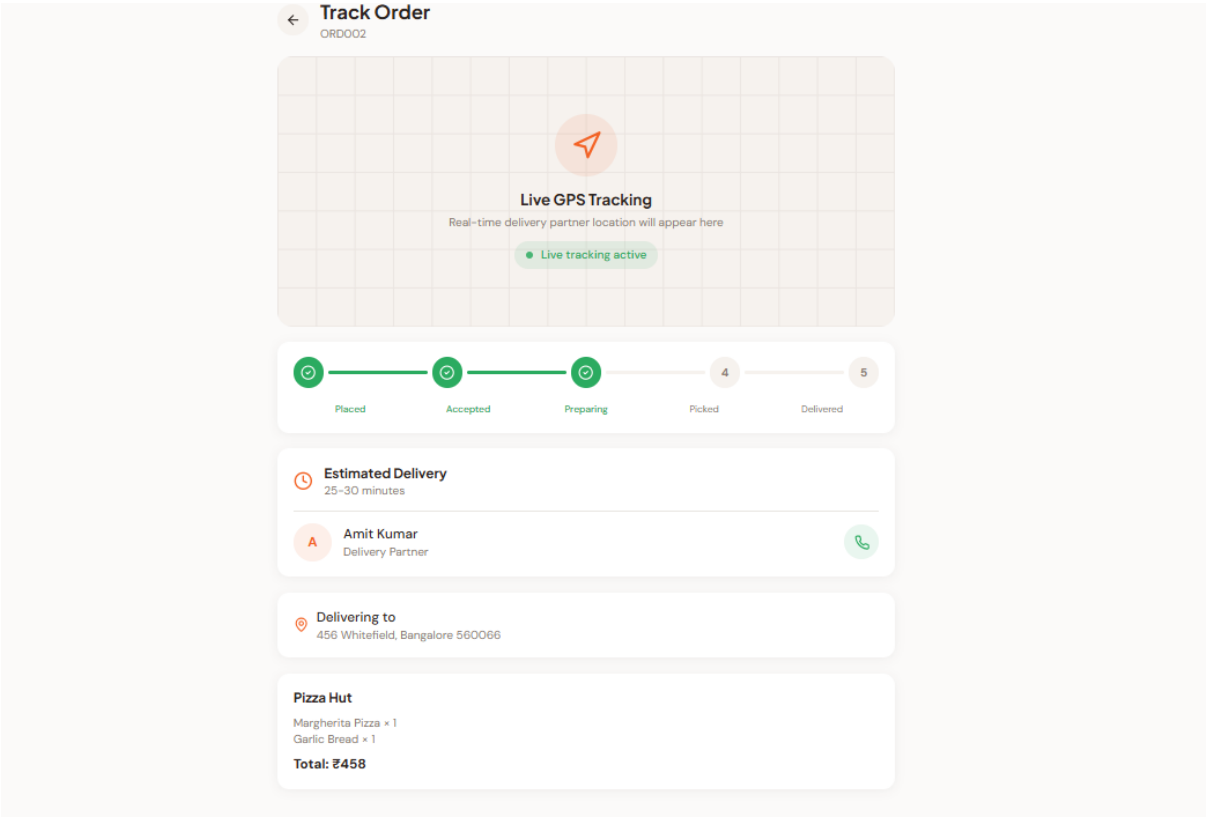


7. Payment Page

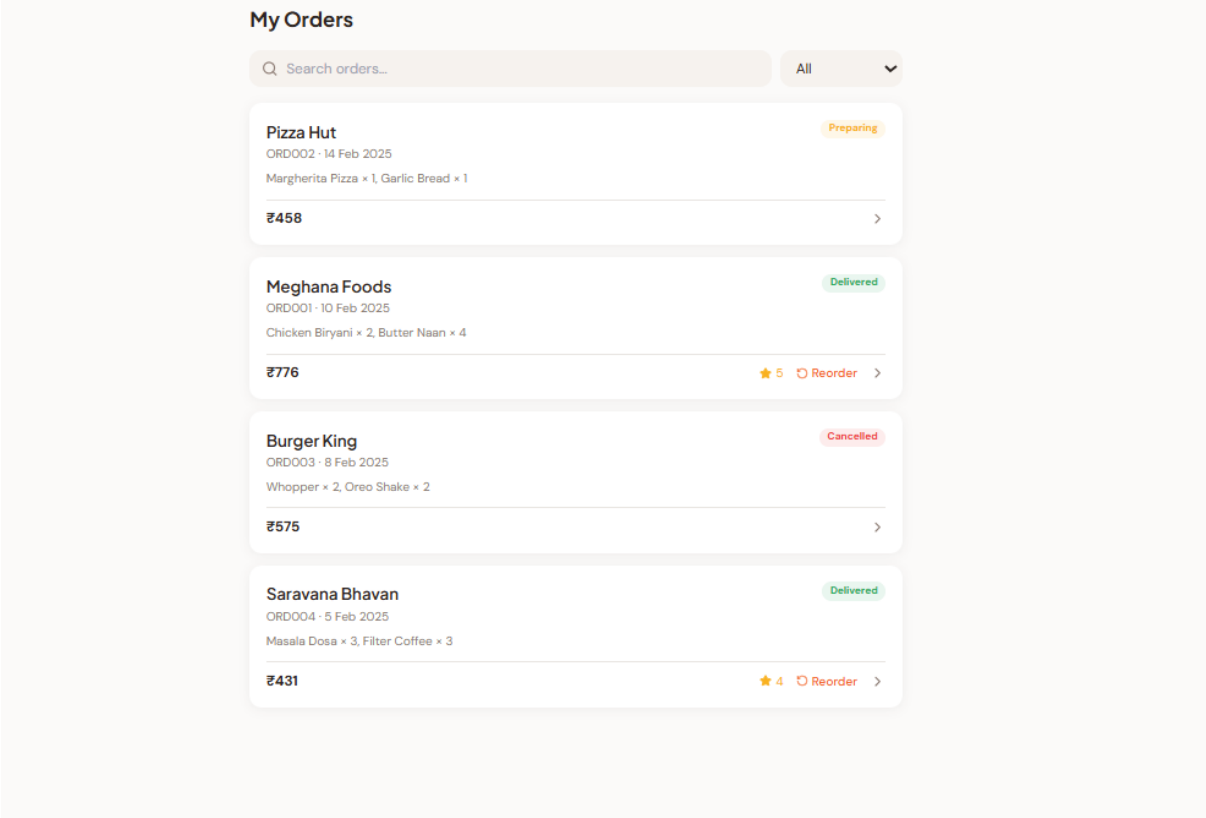


8. Order Tracking Page



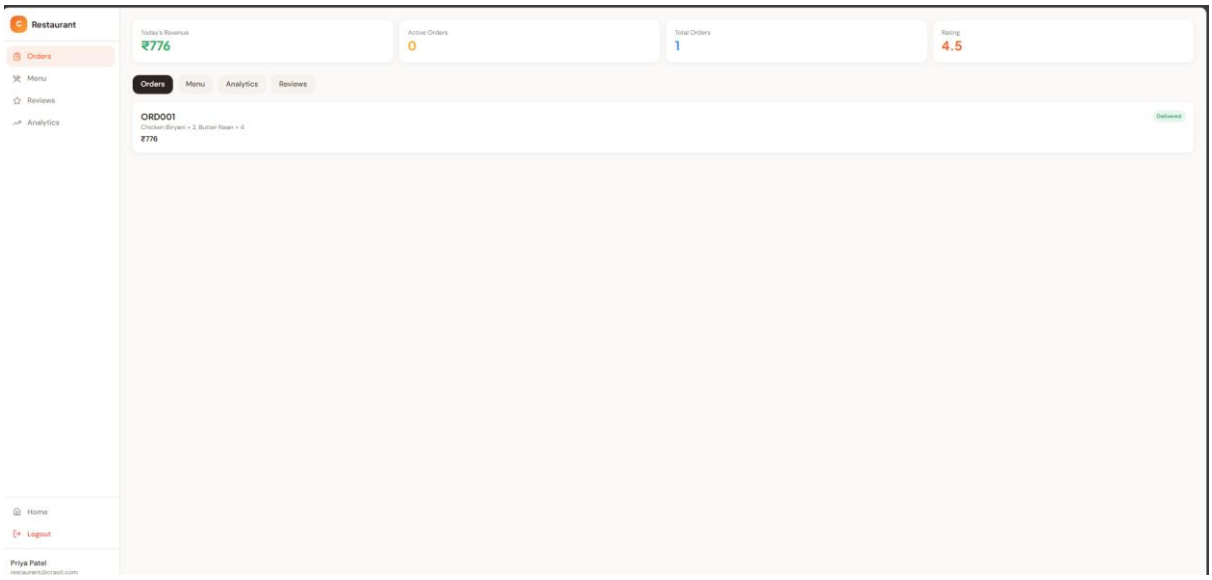


9. Order History Page

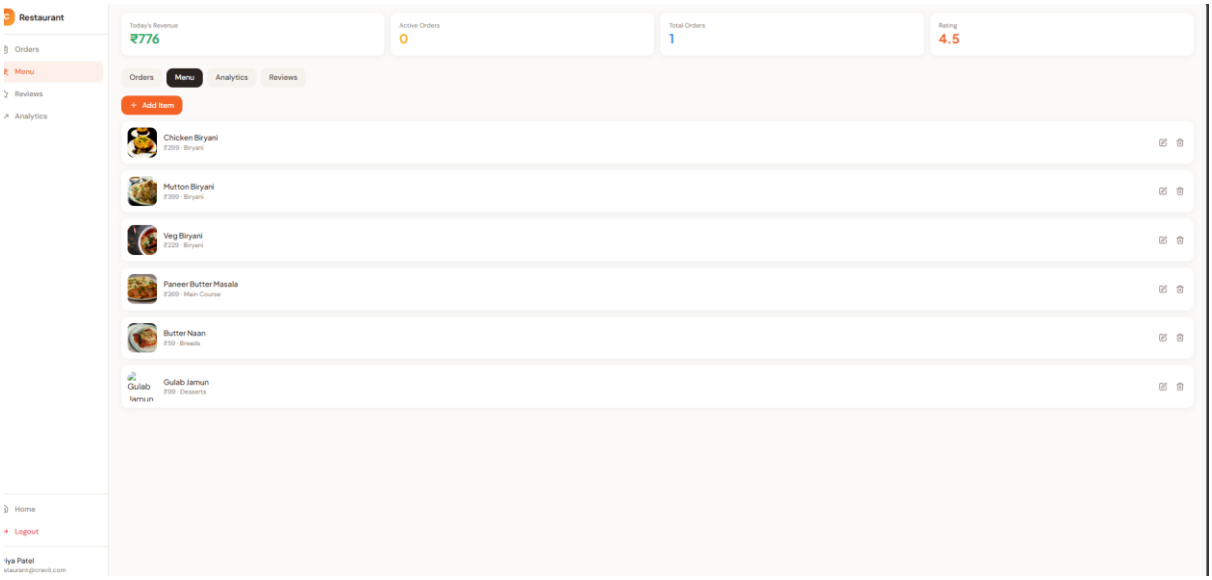


2.2 Restaurant Screens

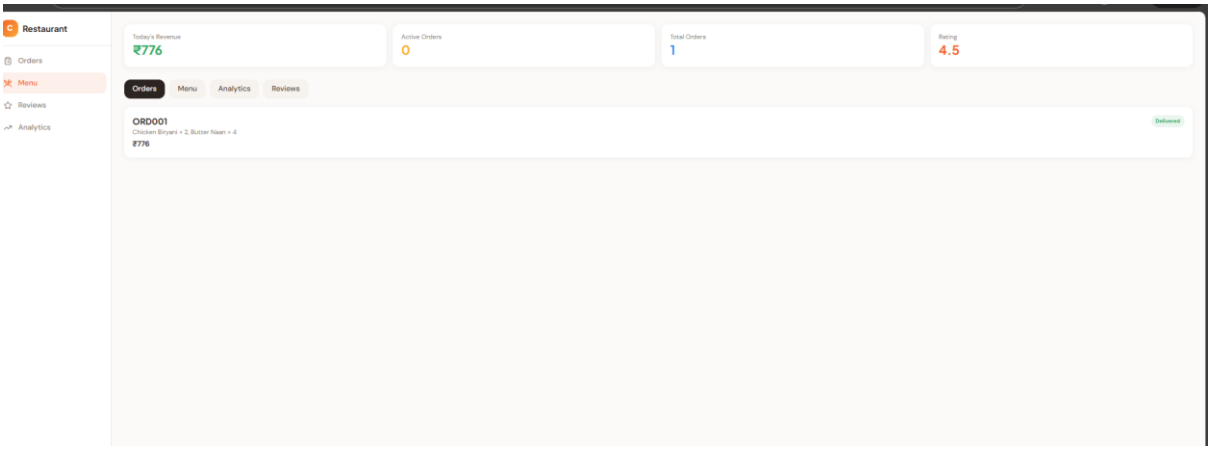
1. Restaurant Dashboard



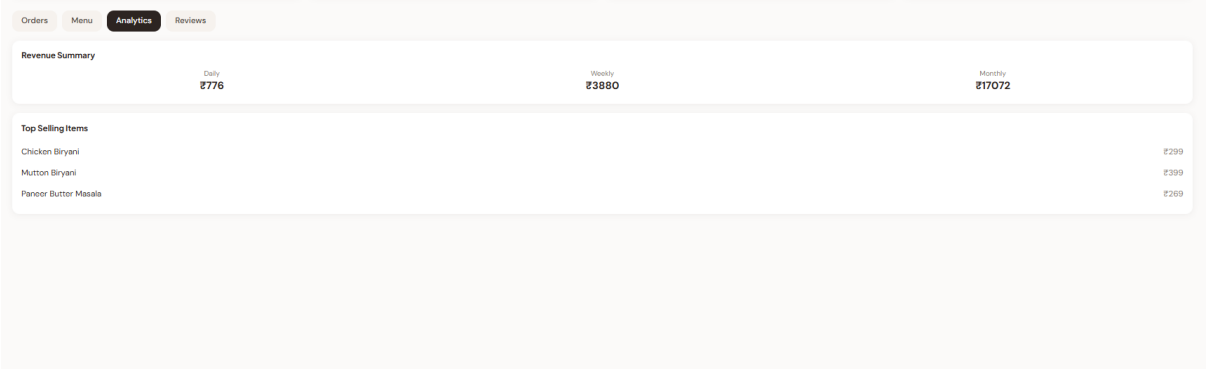
2. .Menu Management Page

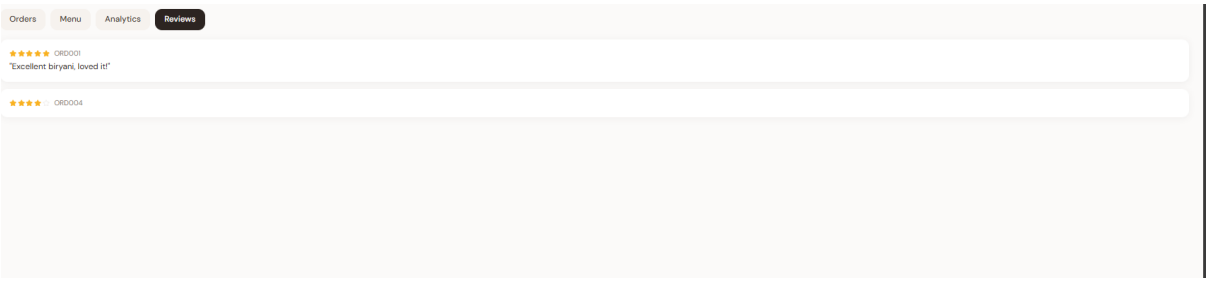


3. Order Status Update Page



4. Analysis And Review Page

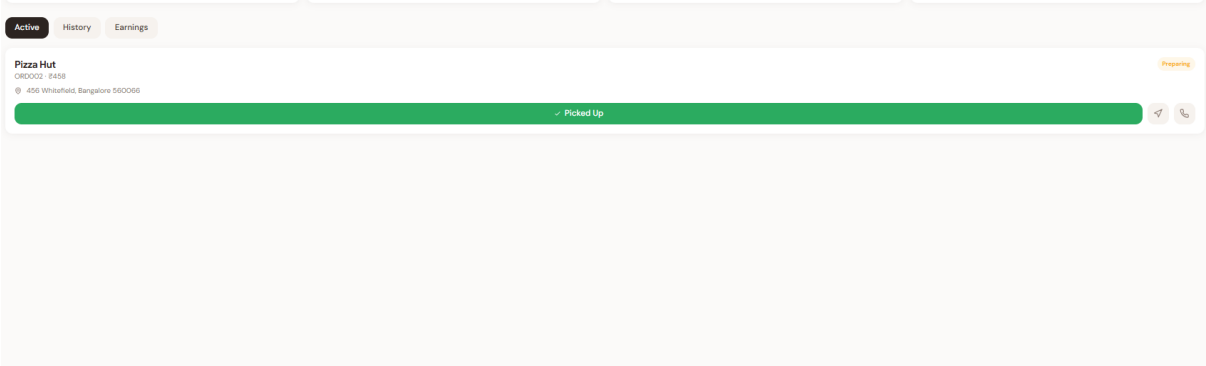




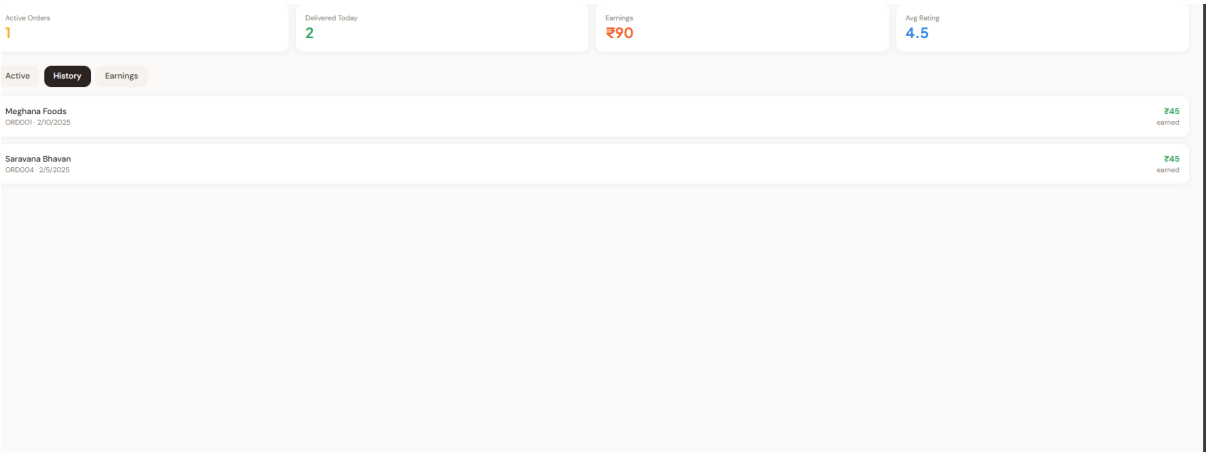
2.3 Delivery Partner Screens

1. Delivery Login Page

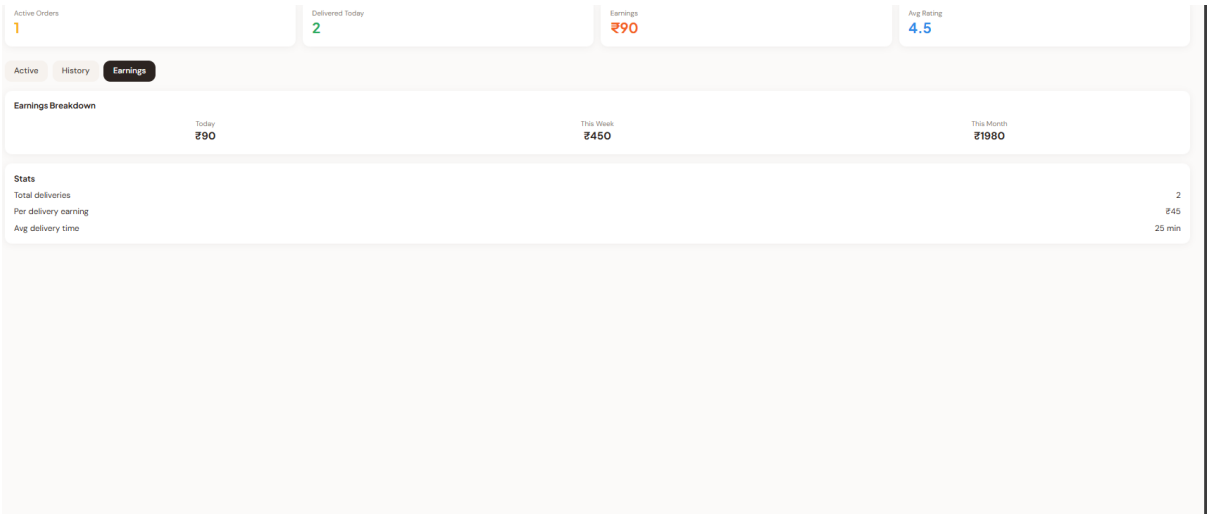
2. Assigned Orders Page



3. Order History Page

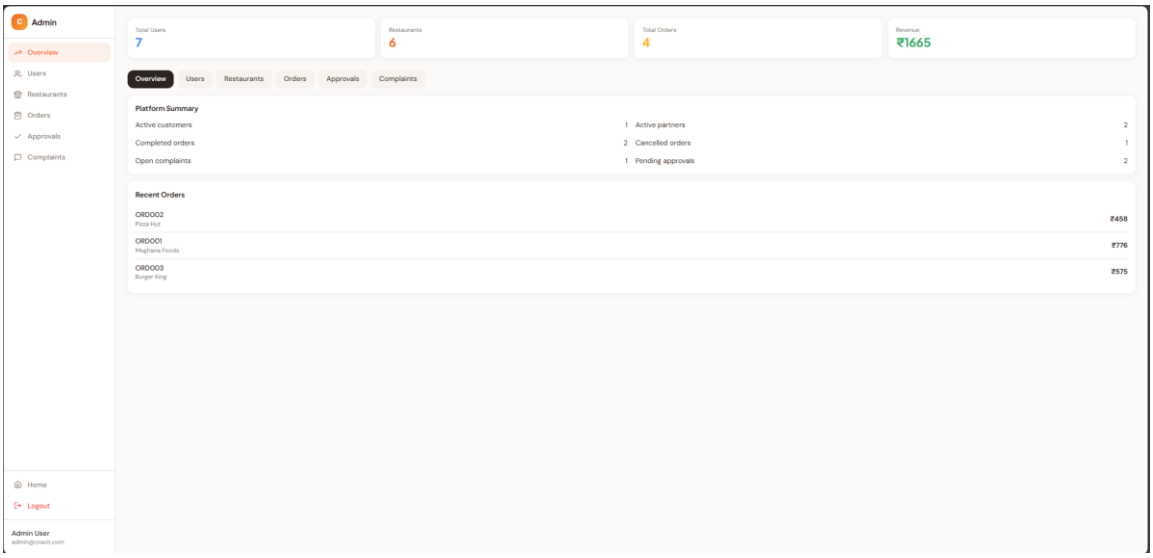


4. Earning breakdown Page

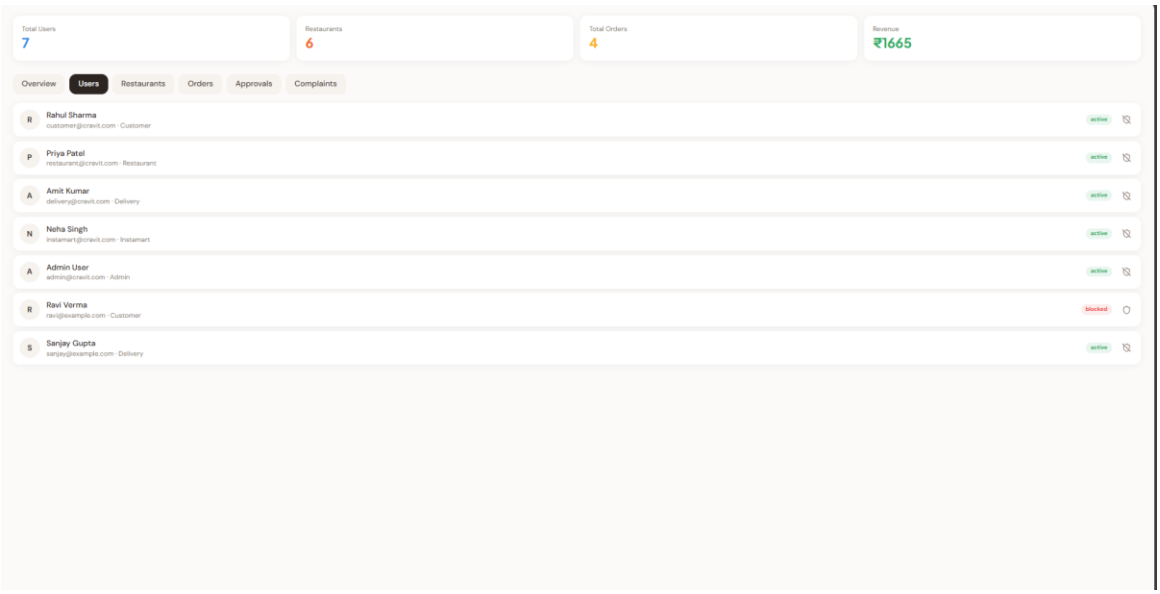


2.4 Admin Screens

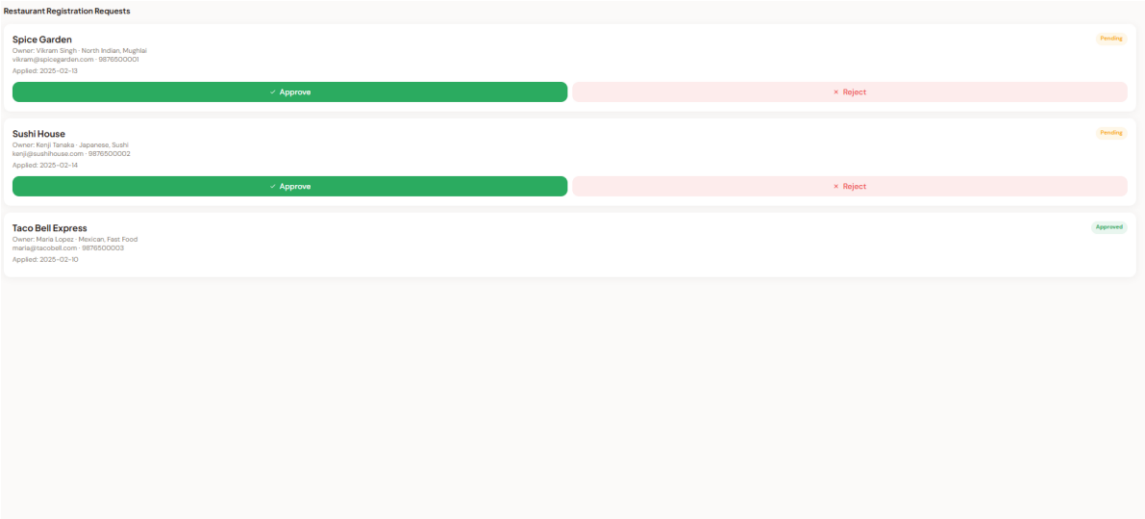
1. Admin Dashboard



2. User Management Page

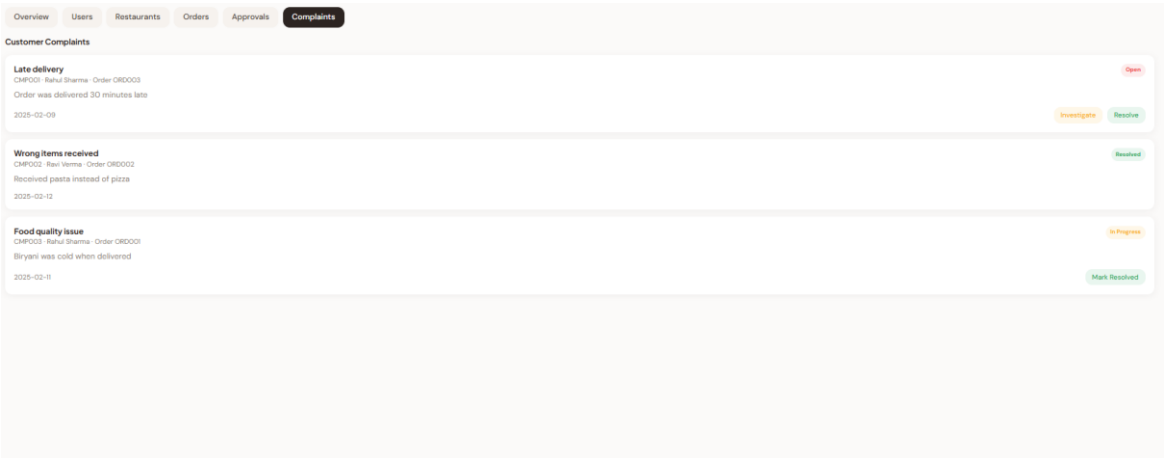


3. Restaurant Approval Page



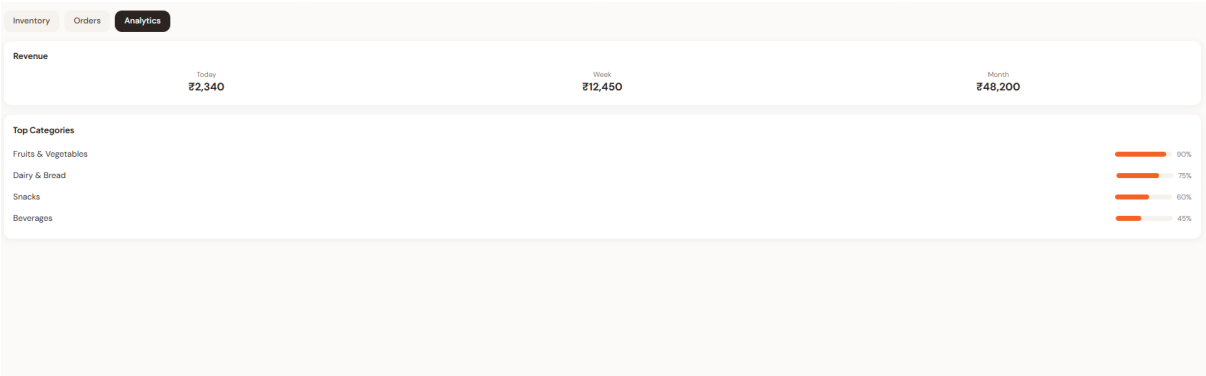
4. Order Monitoring Page

5. Complaint Handling Page

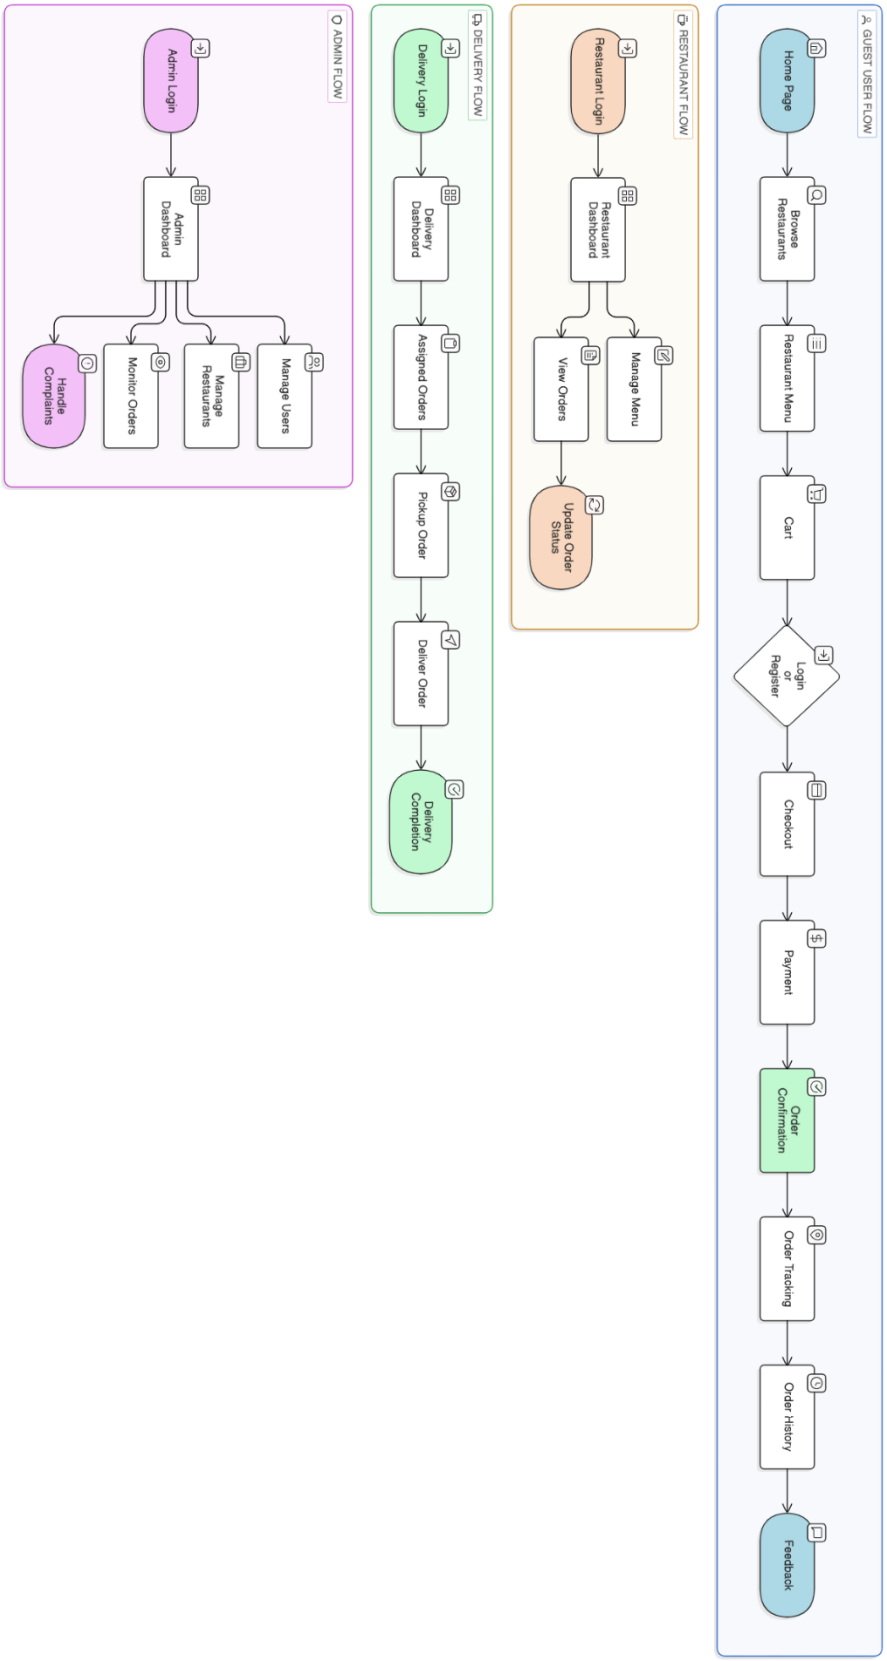


2.5 Instamart Module Screens

1. Dashboard



3. Navigation Diagram



Conclusion

This UI/UX design document presents the navigation flow and interface structure of the Smart Food Ordering and Delivery Platform. The design focuses on making the platform easy to use for customers, restaurants, delivery partners, and administrators.

The system allows users to browse restaurants, place orders, track deliveries, and provide feedback in a simple manner. Separate dashboards are provided for restaurants, delivery partners, and admin to manage their activities properly.

Overall, the proposed design helps users interact with the system easily and supports smooth ordering and delivery management. Future improvements can further enhance user experience and platform features.
